

Problem 1 :

Problem 2 :

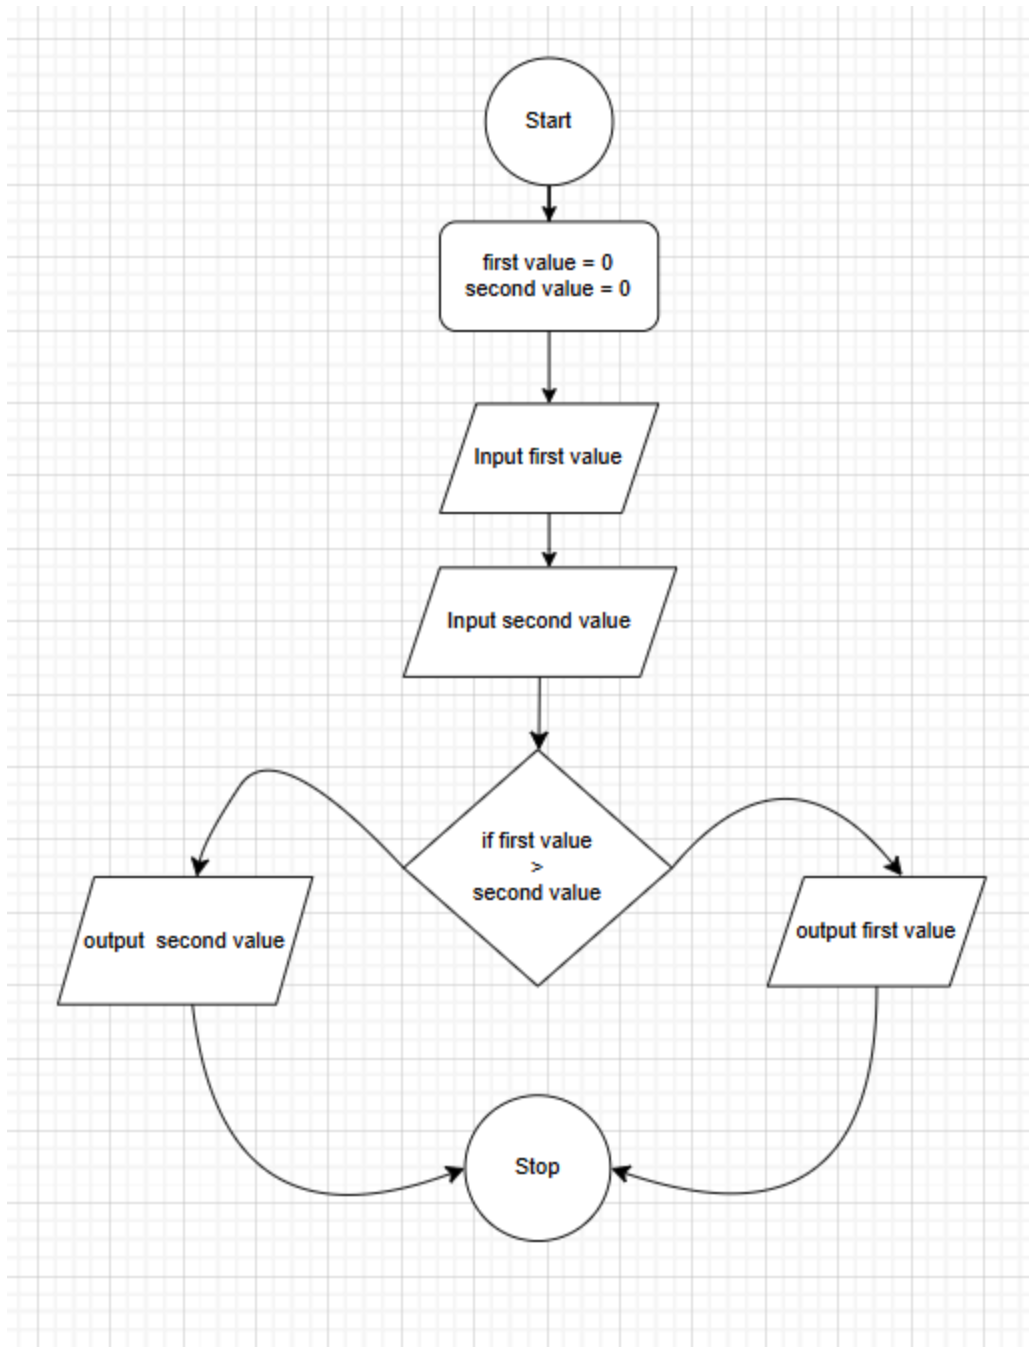

Additional Activities :

1. **Design an algorithm and the corresponding flowchart for finding the sum of the numbers 2, 4, 6, 8, ..., n (output: Algorithm and Flowchart)**

Algorithm :

```
start
input first value
input second value
if first value > than second value
then output first value
else output second value
stop
```

Flowchart :

2. Write an algorithm to read 100 numbers and then display the sum.

Algorithm :

```
start
sum = 0
repeat 100 times:
input a number
add number to sum
output the sum
stop
```

3. **Write an algorithm to read two numbers then display the largest.**

Algorithm :

```
start
input first value
input second value
if first value > than second value
then output first value
else output second value
stop
```

4. **Write an algorithm to read two numbers then display the smallest**

Algorithm :

```
start
input first value
input second value
if first value < than second value
then output first value
```

else output second value
stop

5. **Write an algorithm to read three numbers then display the largest.**

Algorithm :

start
input first value
input second value
input third value
if first value > second value & second value > third value
then output first value
if second value > first value & first value > third value
Then output second value
else output third value
stop

6. **Write an algorithm to read 100 numbers then display the largest.**

Algorithm :

start
sum = 0
input a number
repeat 100 times:
output largest number
stop
